

Keyword Harvesting Decision Tree

Amazon VA Interview Lab

Decision Framework

For each search term in your report, follow this decision tree:

Step 1: Check Click Volume

- Less than 10 clicks !' MONITOR (insufficient data)
- 10-20 clicks !' Continue to Step 2
- More than 20 clicks !' Continue to Step 2 with confidence

Step 2: Check Sales Performance

- Has sales AND good ACoS (below target) !' PROMOTE to exact match
- Has sales BUT high ACoS !' MONITOR or reduce bid
- No sales after sufficient clicks !' Continue to Step 3

Step 3: Evaluate Relevance

- Relevant to product !' PAUSE keyword or reduce bid significantly
- Irrelevant to product !' NEGATE (add as exact negative)
- Partially relevant !' MONITOR with reduced bid

Promote Criteria

- 2+ orders from the search term
- ACoS at or below target
- Sufficient click volume (15+)
- Term is relevant to the product
- Action: Add as exact match keyword in a performance campaign

Negate Criteria

- Irrelevant to the product
- High clicks, zero sales, clearly wrong intent
- Competitor brand terms you do not want to target
- Action: Add as exact negative at campaign or ad group level
